Education

Georgia Institute of Technology — Atlanta, GA
B.S. in Industrial Engineering; GPA: 3.95/4.0 — *Graduation: May 2025*

Concentrations and Threads: Analytics & Data Science

Courses: Data Input & Manipulation, Discrete Math, Application of Probability & Statistics, Supply Chain Logistics Manufacturing, Engineering Optimization, Multi-Variable Calculus, Regression & Forecasting, Constraint Programming, Computer Organization & Programming

Experience

NCR Corporation — May 2023 - August 2023
Product Management Intern — *Atlanta, GA*

- Created an Order Confirmation Index for digital signage products offered in the retail industry through the use of cloud-based applications such as Global Solutions Data Base (GSDB) & Merlin
- Developed an algorithm to discontinue end-of-life products in Q3 through setting constraints on revenue trends via Jira Align
- Optimized the POS interaction regarding self-checkout systems through developing a linear program based on 2022 OKR requirements that minimized kiosk processing times by 3.6%
- Showcased findings in Tableau to 350+ board directors & employees at NCR Global Headquarters during the Intern Exhibition

Epic Intentions — January 2023 - May 2023
Software Engineer — *Atlanta, GA*

- Developed a mobile interface for the Grant Park Conservancy using the React framework that highlighted park attractions & provided users with an immersive virtual walking tour
- Focused on the UI/UX aspect for each individual screen presented by the app through integrating design principles such as affordances & natural mapping to pinpoint precise locations & create a seamless & meaningful user experience

Georgia Institute of Technology — January 2022 – May 2023
Undergraduate Research — *Atlanta, GA*

- Worked under assistance of Dr. Nicoleta Serban to further analyze the demographics of opioid usage in the medicaid population
- Read in various MAX & TAF files from ResDAC & used SQL to create tables containing personal data such as patient-ID, race, geographical region, gender, birth date, death date, etc. for each state in the U.S.
- Developed a research paper outlining each phase of my design process & summarized findings through identifying regression lines in scatter plots & pie charts using Matplotlib

SPH Analytics — May 2019 - August 2019
Data Analyst Intern — *Duluth, GA*

- Measured the efficacy of patient health-related information through auditing previous data reports, updating individual records, & quantifying data in a visually pleasing manner through cross-tabulation via Microsoft Excel
- Worked with skilled analysts in a professional setting to gain exposure regarding advanced data computation & collaboration
- Assisted senior leads in creating data reports to reflect quarterly benefits & past performance insights for company stakeholders

Projects

- **Socioeconomic Relations | Data Input & Manipulation**
  - Utilized Selenium to convert data sets belonging to the U.S. Census Bureau & W.H.O. from JavaScript into Python to be able to parse through the information & create tables highlighting correlations between life expectency & average income through NumPy & Pandas
  - Cleaned the data to remove any NULL values or repetitive information & then ran linear regression models within tables signifying which socioeconomic factors (income, age, race, etc.) correlate the best with an individual's life expectancy
  - Attained a R-value of 0.81 for the income table, concluding that average income is the best indicator of one's life expectancy, and used Plotly to deliver visualizations of the tables for a presentation
- **Simple Airline Management System | Introduction to Database Systems**
  - Provided with a scenario description & sample data elements to create an Enhanced Entity Relationship Diagram (EERD) documenting cardinality between relations & attributes for various weak/strong entity types
  - Converted the EERD Diagram into a relational database via SQL & used the cross-reference approach to identify key attributes and integrity constraints needed to create a large physical database schema
  - Utilized stored procedure shells to implement various usage scenarios to retrieve desired outputs & converted the findings into a desktop interface with a home screen & interactive widgets representing each scenario using PyQt5

Technical Skills

Programming Languages: Python, HTML, R, SQL, Tableau, Java, JavaScript, C++, Apache Spark
Libraries & Services: NumPy, Pandas, PyMySQL, Matplotlib, AWS Lambda, AWS Athena, Microsoft Excel
Additional Skills: Data Modeling, Machine Learning, Quantitative Analysis, Project Management, Supply Chain Optimization
Accolades: STAMPS Presidential Scholar Semifinalist, Faculty Honors, Dean's List, Presidential Service Award
Interests: Basketball, Biking, Video Games, Golf, Swimming, Reading, TV Shows
